

Q1. A $12\mu\text{C}$ charge is placed at the origin. What is the electric field at $\mathbf{x} = 5.0\text{ m}$? If an electron is placed there what would be the magnitude and the direction of its acceleration?

Q2. A $12\mu\text{C}$ charge is placed at the origin. A second $-8.0\mu\text{C}$ charge is placed 1.0 m to the right of the first. What is the electric field at $x = 3.0\text{ m}$?

Q3. A $12\mu\text{C}$ charge is placed at the origin. A second $-8.0\mu\text{C}$ charge is placed 1.0 m to the right of the first. At what location will the electric field equal zero?

Q4. A $12\mu\text{C}$ charge is placed at the origin. A second $-8.0\mu\text{C}$ charge is placed 1.0 m to the right of the first. A third $6.0\mu\text{C}$ charge is placed 1.0 m above the first charge. What is the electric field at the point $(1,1)$?
